Application Examples

Very strong and stiff parts; low coefficient of thermal expansion.

Low influence from moisture and temperature to measures and electrical properties, compared with PA66

Automotive industry, textile- and office machinery, apparatus- and precision engineering.

Recommended Processing Instructions

General

In general LUVOCOM® 3F can be processed on conventional extrusion moulding machines while observing the usual technical guidelines.
Any added fibrous materials or fillers may have an abrasive effect. In this case the cylinder and screw should be protected against wear as is usual in the processing of reinforced thermoplastic materials.
Lengthy dwell times for the melts in the cylinder should be avoided.
Lower the temperatures during interruptions!

Predrying

(optional)

It is advisable to predry the granulate with a suitable dryer immediately before processing.
The granulate may absorb moisture from the air.

Dryer type	Temperature°C	Drying time in h
Dehumidifying dryer	130	6 to 8
Vacuum Dryer	120	4 to 6

Processing Temperatures

Zone 1	°C	260 to 300
Zone 2	°C	260 to 300
Zone 3	°C	260 to 300
Nozzle	°C	250 to 290
Mass-Temperature	°C	optimum 280

Delivery Form & Storage

Unless indicated otherwise, the material is delivered as 3mm-long pellets in sealed bags on pallets.

Preferably storage should be effected in dry and normally temperatured rooms.

Additional Information

The filament can be wound into standard size spools.
3D Printing parameters may vary from machine to machine, the following settings can be use as an indication:
Nozzle temperature: 270 - 290 °C Print Bed Temperature: > 50 °C Layer Thickness: >0,2mm

The processing notes provided merely represent a recommendation for general use. Due to the large variety of machines, geometries and volumes of parts, etc., it may be necessary to employ different settings according to the specific application.
